Agentic Edge Lab · members-only quick reference

ICT KILLZONES (anchored to New York / EST)

SESSION	NEW YORK (EST)	READ
Asian Killzone	**8:00 PM - 12:00 AM**	Accumulation; sets the range
London Killzone	**2:00 - 5:00 AM**	First expansion / Judas swing
New York AM Killzone	**7:00 - 10:00 AM**	Primary morning session
London Close Killzone	**10:00 AM - 12:00 PM**	Rebalance; position for PM
NY Lunch (no new entries)	**11:30 AM - 1:30 PM**	Liquidity traps; mark levels
New York PM Killzone	**1:30 - 4:00 PM**	Afternoon expansion / sweep

Silver Bullet (1-hr, EST): London 3-4 AM · NY AM 10-11 AM · NY PM 2-3 PM

EST anchor (ICT sessions are defined in New York time). London = EST + 5h (BST); re-check around DST.

SMC PRE-TRADE CHECKLIST

1. HTF bias first - where is the daily / 4H draw on liquidity?
2. Mark your levels - FVGs, order blocks, BSL/SSL pools, premium/discount.
3. Trade the killzone - skip A+ setups outside the windows above.
4. Wait for the sweep - has price run a high or low (stops) before turning?
5. Confirm the shift - BOS / CHoCH on your entry timeframe.
6. Refine the entry - FVG or order block inside the dealing range; risk first.
7. Fix risk before entry - set stop and target; never widen a stop.

CORE TERMS

Order block - last opposing candle before an impulsive move; institutional footprint.
Fair value gap (FVG) - 3-candle imbalance price often returns to fill.
Liquidity (BSL / SSL) - resting stops above highs / below lows.
BOS - break of structure - trend continuation.
CHoCH - change of character - first sign of a structural shift.
Draw on liquidity - the magnet price is likely heading toward next.

Educational only - not financial advice. Trading futures carries substantial risk of loss; capital at risk. Past performance does not indicate future results.
